EurekaLog v7.14 Update 5 (09 Mar 2026) for Support Delphi 12 Athens

2026-04-08 11:21:02

EurekaLog is an indispensable asset for Delphi and C++Builder developers, offering a comprehensive bug resolution solution. This powerful tool empowers applications to meticulously capture every exception and memory leak directly on end-user PCs. With its robust capabilities, generates detailed logs of call stacks, including crucial information such as file, class, method, and line numbers. Additionally, it allows sending log entries via email or to a designated web bug tracker for streamlined management and resolution.

Key Features of **EurekaLog**:

1. Comprehensive exception and memory leak detection
2. Seamless integration with project rebuilds for effortless implementation
3. Compatibility with EXE compressors, ensuring smooth operation within various development environments
4. Accelerated bug identification process, enhancing development efficiency
