

Arclab Website Link Analyzer v3.0 (29 Aug 2023)

2024-12-27 08:53:29

The Internet opened new avenues and provided new options for marketing concerned. However, it's only enough to have a well-designed online site. It is essential to make it accessible to Internet users and increase the number of visits to your site and potential sales. Here's the point where SEO tools come in. One tool that will aid you in optimizing your site and increasing its rank on search engine result pages includes Arclab website Link Analyzer.

A web crawler that detects SEO-related issues

As its name suggests, Arclab Website Analyzer will conduct a thorough examination of a site, obtaining pertinent information about issues that require immediate attention. It is a spider for websites that allows you to search for broken URLs and identify other issues that may adversely affect your website's rank.

Utilizing the program will not be a hassle because of the straightforward interface and easy-to-use choices. Start by adding a new site to the list, then go through the settings for scanning to determine the options you wish to have. To be more precise, you can set the maximum number of simultaneous download threads, alter the timeout and your maximum number of attempts, the maximum link depth, length of the keywords, exclusions, and others.

Find broken links or redirections, duplicates, and even errors

Arclab Web Link Analyzer enables you to follow its progress as it examines the website of your choice and displays statistical data regarding its findings before it is prepared.

The application can detect broken links and anchors that are missing pages that redirect, duplicate HTML-based content and missing title pages, duplicates of page titles, or META descriptions. Additionally, it can detect the charset conflict and identify HTML errors on the server and the client. It also provides information about external and internal sources.

The report is stored in the application; however, you can export it in TXT and CSV format. You can also decide to create an XML or plain text sitemap from your scan's results.

An SEO diagnosis tool for all webmasters

With easy-to-use choices and an easy-to-use GUI that is easy to master, Arclab Website Link Analyzer is a program that can be a great addition to any SEO toolbox. It can analyze a website rapidly, allowing owners to see complete reports that include SEO-related problems or areas that require improvement.

If used properly, this application could help web admins and webmasters significantly improve their visibility for their site through search results.
