miniPOS v1.4.5 (24 May 2022) (Mobile Point of Sale Application Xamarin) Full Source

2024-12-31 16:28:13

Xamarin is a Microsoft-owned software company which is based in San Francisco and was founded in the year 2011. According to it, there are over 1.4 million developers and users that were using the product it almost sounded 20 countries worldwide by the year 2017. It is described to be one of the world's biggest tech success stories of the decade so far. In the year 2011 few developers had heard about 8 and it is considered to be a big-time Wikipedia as the only IDE that has the ability to permit the user and developer for Native Android, iOS animal Windows app development right within the visual studio of Microsoft. This particular project was never expected to be commercially viable unless it was able to pick up or being supported by the large companies. Currently, it stands as a side project which is done by a bunch of developers during their spare time. The developers were capable of questioning why this project even existed are present. According to a single developer, there are reasons why this match can work such as because the user still desires to work in the C# but he wants also to keep the process of using and performance of the flutter, or even the user has the existing logic code of the .NET which is shared with other projects that the user desires to reuse. It is considered to be a complete point off-sale program that has the ability to sell orders as well as procedures anyplace right in the apparatus to be used in the stores or even retail outlets that are in the house. It has the ability to use the database of the SQLite to keep all the system information so that no online connection is required for the user and the developer. It has the ability to synchronize the information with the host via the restful API for the users. With the help of this unique program, the user is capable and assured to conserve the time-consuming process for the creation of the mobile point-of-sale system which has the ability to support both Android as well as iOS apparatus. It doesn't describe to be assembled with the Xamarin. Forms that have a complete share code of 95% and even 5% platform which is a specific code and it is used to export the information, along with picture section and a lot of few additional segments for its users and developers.
