nSoftware Cloud Calendars 2024 v24.0.9545 (24 Feb 2026) .NET Edition

2026-04-30 16:48:48

nSoftware Cloud Calendars provides the ease of developers to add the capability of calendar and task management to their applications. It can be linked to such popular cloud services as Microsoft 365 or Google, and you can add the calendars, events, and task lists there with an easy click to be synchronized with your app. It is packed with embedded OAuth 2.0 authentication and can easily connect with the modern cloud.

Cloud Calendars also allow you to build and manage calendars, organize events, and recurring meetings or reminders without having to deal with APIs at a low level. It also allows the addition of attendees, attachments, and custom colors to enhance a better organization. The task management tools also enable you to create, edit, and update tasks, alter the status of tasks, add notes, and even set a due date, all in a simple, consistent code.

nSoftware Cloud Calendars is developed in a simple and unified interface, which can be used on any platform and programming language. It is lightweight, fast, and supports FIPS 140- 2 compliant encryption to establish secure communication. All the parts were put through tests to give you solid performance, and you can now worry about creating features that your users will adore without fearing the complexity of the back-end.

Key Features of **nSoftware Cloud Calendars**:

1. **Support for Microsoft 365 and Google:** Integrate directly with major calendar and task providers for seamless cloud synchronization.
2. **Simple Authentication:** Uses OAuth 2.0 for secure and user-friendly login across all supported services.
3. **Calendar Management:** Create, view, edit, and delete calendars while customizing their color, location, and other properties.
4. **Event Management:** Handle recurring events, reminders, attendees, and file attachments in just a few lines of code.
5. **Task Management:** Add, update, and organize tasks; modify details like notes, status, visibility, and due dates.
6. **Unified and Extensible API:** Enjoy a consistent programming experience across different development platforms.
7. **High Security:** Employs FIPS 140-2 compliant cryptography to protect data and connections.
8. **Lightweight and Efficient:** Optimized for fast performance and minimal resource use in production applications.
9. **Thread-Safe Components:** Designed to run safely in multi-threaded environments for scalable solutions.
10. **Comprehensive Documentation:** Comes with examples, reference guides, and a large knowledge base to help developers get started quickly.
