

Keyoti RapidSpell WPF v4.1.0 Ratail + Keygen

2024-12-18 23:03:15 [label](#) [我要反馈](#) [下载页面](#)

RapidSpell WPF is inserted into any program to supply a completely independent and extremely customizable spell checking management. RapidSpell WPF may also be utilized in non-GUI contexts using its spell checking API. Composed exclusively for WPF, RapidSpell comprises 4 Language dictionaries and several different dictionaries can be found (such as medical).

Surprise your customers with fully featured spell check; as you form, dialogue, user choices, autocorrect, and custom dictionaries. RapidSpell WPF is constructed upon 12+ years of expertise, it's absolute .NET using a WPF front end which will be easily styled to fit in perfectly with your XAML UI. We've got millions of users all around the planet, using our 21 dictionaries (like medical, legal, and four English language variants).

RapidSpell WPF supplies:

- Integrated As You Type and Dialog Assessing
- Open API
- Unbelievably Adaptive
- Automobile Correct
- Multiple Languages Supported

RapidSpell comprises 3 cookie controllers; RapidSpellDialog for conversation-based spell checking, RapidSpellAsYouType to get as-you-type spell checking, and RapidSpellChecker search engine for spell checking cords.

RapidSpellAsYouType - Spelling mistakes are emphasized or autocorrected since the user types, right-clicking on a highlighted phrase indicates a context menu with ideas and alternatives to ignore All' or'Insert' to the dictionary. Contains English/Customizable Autocorrect. Works together with TextBox and RichTextBox. Just 1 case of RapidSpellAsYouType is necessary for all text boxes on a form.

RapidSpellDialog - RapidSpellDialog includes all of the regular GUI attributes, include, reverse, choices, change, change all, ignore, ignore all of the smart suggestions, and dual word detection. Checks selections, entire files with wrap, in the end, take manual adjustments and enables the user to edit primary file during spell check.

Alternatives - The customizable alternative forms supply the consumer with various spell checking alternatives and also the capability to alter the contents of the user dictionary' (if triggered).

RapidSpellChecker - RapidSpellChecker is your motor at the API, it may be used to spell check strings and may form the cornerstone of a personalized user experience.

Dict Manager - RapidSpell comprises Dict Manager free, allowing total customization of their dictionaries.

Technical details: The RapidSpell WPF API was developed to provide for simple customization. The conversation GUIs could be redesigned simply by altering the UI XAML from the VS designer, origin is contained in the demonstration projects. The behavior of the GUI may be customized by changing the XAML code-behind or the presenter class (via subclassing).

The RapidSpellDialog and RapidSpellAsYouType controllers may be set to test multiple text boxes on a form, this usually means that only 1 case is utilized which speeds up the layout and enhances efficiency.

Dictionary customization: Dict Manager, lets RapidSpell Dict documents to be customized and made with other word listings.
