Articulated Sounds Magic Elements Vol 2: Create and destroy with the exploding power that is Anime, the most popular animation sound effects collection ideal for content creators of all types. With classic Japanese anime sound effects created with modern and fresh ideas and inspired by works such as Neon Genesis Evangelion, Dragon Ball Z, Trigun, Cowboy Bebop, and more, you'll have all the tools to create an authentic cartoon retro style. Make your work more memorable by using dynamic and expressive sound effects influenced by the established conventions of animation sound design.

This Anime library was created and recorded through Jason Strawley and Andrew Garraway using Eurorack modular synthesizers and a Moog Matriarch. The library was created after months of research as well as trial and error and perfecting the classic "anime sound," this library packs a punch using warm analog zaps and zaps, as well as extreme explosions, whooshes and explosions, weapons, sounds, and many more. Certain sounds can also be provided with different versions of the sound made using tape for the slightest crunch and a warmer sound. You can add that familiar high-voltage, sharp distortion to your videos, games, television shows, animations, and videos.

"We tried for months to figure out what makes Anime sound distinct. Not many details are available on the process of creating these sounds. We knew the sounds were largely synthesized and usually more abstract than what we'd listen to on Western entertainment. Beyond this, the only thing we could take as a reference point was our in-house smell test to determine if it make you think of Anime?" Jason Crawley

Every sound file is loaded with rich metadata, which helps to find the sound effect you require with a quick, precise search. Advanced metadata fields make sure that the sound is compatible with any database search platform, including SoundQ, Soundminer, BaseHead, Netmix, Workspace (Pro Tools), Find Tool (Media Composer), Media Bay (Nuendo), Reaper, Adobe Premiere, and more.

- 657 files (4.8GB)
 - This package includes 189 duplicate files that have been masterfully recorded to tape
 - 468 unique files
- [View Sound List](#)
- 24-bit/48kHz, 24-bit/96kHz WAV files
- Metadata with descriptive descriptions embedded
- Universal Category System (UCS)
- 100% Royalty-Free
