Devart dotConnect for MailChimp Professional v3.0.0 (18 Dec 2025)

2026-01-12 12:09:41

seamlessly integrates Mailchimp data with .NET applications. Its standard ADO.NET classes streamline access, eliminating the need for in-depth API study. Through intuitive design-time editors and Visual Studio integration, developers can swiftly establish connections and manipulate Mailchimp data within familiar environments.

The connector empowers developers with SQL capabilities, facilitating CRUD operations and complex queries against Mailchimp entities. Supporting Entity Framework versions 4 through Core 7.0, **Devart dotConnect for MailChimp Professional** extends LINQ to Entities functionality to Mailchimp data. Bundled visual designers like Entity Developer enhance ORM modeling, further simplifying Mailchimp data management within .NET projects.

Key Features of **Devart dotConnect for MailChimp Professional** :

1. Seamlessly integrates Mailchimp data with .NET applications
2. Utilizes standard ADO.NET classes for simplified access
3. Intuitive design-time editors and Visual Studio integration
4. Enables swift connection establishment and data manipulation
5. Empowers developers with SQL capabilities for CRUD operations
6. Supports Entity Framework versions 4 through Core 7.0
7. Extends LINQ to Entities functionality to Mailchimp data
8. Bundled visual designers like Entity Developer enhance ORM modeling
