TMS MQTT v2.0.8.1 (10 Oct 2024) for Delphi & CB XE5-12 Athens Full Source

2025-01-02 10:42:26

TMS MQTT is a cross-platform messaging client library that fully implements the MQTT v3.1.1 and v5 specifications, enabling developers to build MQTT client applications quickly and efficiently. With its RAD component-based approach, **TMS MQTT** facilitates MQTT communication, offering high performance and compliance with MQTT specifications.

Featuring a fast and safe non-blocking multi-threaded component architecture, ensures compliance with MQTT standards while providing optimal performance. The library includes a non-visual logger component for enhanced debugging and monitoring capabilities. Compatible with VCL, FMX, and LCL applications, **TMS MQTT** supports various platforms, including Windows, macOS, Linux, iOS, Android, and Raspberry Pi, making it a versatile solution for diverse development environments.

Key Features of **TMS MQTT** :

1. Cross-platform messaging client library implementing full MQTT v3.1.1 and v5 specification
2. RAD component-based approach for building MQTT client apps efficiently
3. High performance and specification compliance
4. Non-blocking multi-threaded component architecture
5. Includes non-visual logger component for debugging and monitoring
6. Compatible with VCL, FMX, and LCL applications on Windows, macOS, Linux, iOS, Android, and Raspberry Pi
