MySQL to Dot Net Core Automatic REST API Generator + JWT Auth + Swagger + Postman

2024-12-18 23:01:45

Automatically Create.NET Core professionals ready to use REST API From MySQL Database With Postman Docs & Swagger and JWT Authentication

- 100% Automatic Dependency Injection, Layered Architecture
- Publish to Docker and cloud easily
- Swagger Document is ready for immediate use
- You can generate code from any MySQL database
- Instant & Free Skype or Email Support

C#.net core RESTAPI Generator, a powerful and intuitive tool to create REST APIs from MySQL, is built with the most trusted web technologies. Use it in your company or for personal projects. You can deploy it in seconds to the cloud and integrate any front-end technology such as Angular/React, Mobile Application, or Mobile Application.

It allows you to create the REST API multiple times with the windows application. You can make any changes to your database and generate the code again. The API Generator does not require installation.

REST API Generator analyzes your MySql database to determine all relationships, fields types, values, validation, primary and secondary keys, field types, and validation. To perform dependency injection, generate data annotated models and interfaces.

This intelligent analysis allows us to pre-configure each option for each endpoint in the REST API.

MySQL to Dot Net Core Automatic REST API Generator + JWT Auth + Swagger + Postman Great Features:

The generated code can be hosted to your cloud server or IIS with SSL enabled, and it will be ready to use within a minute.

The generator tool also generates the POSTMAN import file according to the REST API and helps you quickly start your testing. Even you get the swagger document generated to circulate to your business owners easily.

- Primary keys detection and interpretation
- Secondary keys detection and interpretation
- Detection of all types of relationships
- Smart integration of internal/external relationships in CRUD
- Smart field type detection and integration
- Detection and integration of validation types
