Altova XMLSpy Enterprise 2026 v28.0.0.3 for Win x64 & x86

2026-04-08 14:40:12

Altova XMLSpy Enterprise is a powerful XML/JSON editor designed to assist developers in working with data and editing and validating data using it with ease. It is an integrated suite of applications to build and manage rich data formats, including XML Schemas, XSLT, XQuery, JSON Schemas, and others, within a clean and user-friendly interface. XMLSpy is the tool that you need to fasten and correct data, whether you are a beginner or an expert dealing with high-end systems.

The software does not stop at editing, but takes automation, visualization, and integration to a higher level. XML Schemas can be graphically designed, files can be validated in a lightning-fast RaptorXML Server integration, files can be converted to and from JSON and XML and can be automatically generated in Java, C#, or C++. It also comprises of advanced debugging and profiling tools on XSLT, XPath, and XQuery, to enable developers to optimize and debug their transformations and queries easily.

In addition to XML and JSON, the **Altova XMLSpy Enterprise** also has the benefit of supporting many of the latest technologies, such as XBRL, OOXML (Office documents), Apache Avro, and even web services such as SOAP and WSDL. It is fully compatible with IDEs such as Visual Studio and Eclipse, and it can be considered an all-encompassing software development environment used by developers across various platforms. XMLSpy makes it easy to create or build data-driven applications, to build a schema, or simply to test a web service.

Key Features of **Altova XMLSpy Enterprise**:

1. **XML & JSON Editing:** Edit and validate XML and JSON files with real-time error checking, syntax highlighting, and code completion for fast, accurate work.
2. **Graphical Schema Designer:** Create and visualize XML Schemas or DTDs using an easy drag-and-drop interface, with instant validation and refactoring tools.
3. **XSLT, XPath & XQuery Tools:** Write, debug, and optimize transformations and queries with built-in debuggers, profilers, and performance analyzers.
4. **High-Speed Validation:** Leverage RaptorXML integration for ultra-fast validation and well-formedness checks across XML, JSON, and XBRL files.
5. **JSON & XML Conversion:** Seamlessly convert between JSON and XML or generate JSON Schemas automatically from existing data structures.
6. **XBRL & Financial Data Tools:** Validate and edit XBRL taxonomies and instance files with visual editors and real-time previews.
7. **OOXML & ZIP Support:** Open, edit, and process Microsoft Office (Word, Excel, PowerPoint) and ZIP archive files directly within XMLSpy.
8. **Web Services Testing:** Test SOAP and WSDL services visually with built-in debugging, authentication, and security support.
9. **Code Generation & Automation:** Generate royalty-free Java, C#, or C++ code from schemas and automate tasks with scripting, ActiveX, or command-line tools.
10. **IDE Integration:** Fully compatible with Visual Studio and Eclipse, providing seamless workflow and productivity within familiar environments.
