Mr. Gestures for Xamarin v2.1.1

2024-12-31 16:22:33

MR.Gestures Manage all touch gestures within your Xamarin.Forms apps.

If you are looking to create apps for various mobile platforms, Xamarin Forms can be a great choice. However, the TapGestureRecognizer was all they had for touch gestures for more than a decade. They have added some new features recently, but they don't give all the information you need. The API they use was copied from iOS, and it is not what a.NET Developer would expect.

MR.Gestures tries to close this gap.

It adds: Down and Up, Tapping and DoubleTapped to every layout, cell, view, and ContentPage. These events will be raised by the user performing the appropriate touch gesture on the element.

You can see what actually happened in the EventArgs that were passed to the handlers.

The.NET Standard / PCL project allows you to use touch gestures in full. All platform-specific code can be done in MR.Gestures.
