Specialist B&W SOFTWARE for B&W Professional photographers and artists

Every photo editing program can be described as feature-driven software. You don't have any implied structure or structure, but you just play around. Artisan ProX is unique since it's a **method-driven** panel. In order to make the panel useful to use it is suggested that the implied method must be adhered to. It's organic, organized, and intuitive as if you were working in an analog darkroom using its digital equivalents.

Similar to the analog darkroom while developing B&W negatives, color has no part in the processing. All adjustments made by the panel are color-independent and based on luminance. Thinking and seeing from the perspective of a B&W photographer, which means being able to think and see in terms of luminance values as well as their variations (contrast) and not focusing on thinking and seeing in the color.

Artisan ProX is a plugin/panel software built around a well-structured and tested method of B&W processing and based on the fundamentals of excellent B&W photography. specifically made for professional and fine art photographers who are looking to be able to work with precision and without creative constraints. This is made possible and is supported through automated sequences (one-click presets) to make the essential adjustments for excellent B&W processing. They have been designed to maximize speed, subtlety, as well as precision.

Artisan ProX is a screen that was created and constructed by photographer and award-winning photographer Joel Tjintjelaar, and highly acknowledged black and white expert who was the first to introduce and along with other artists of similar inclination create a style of visual art of B&W architecture that has been embraced by a growing international crowd over the past 10 years. The term "Fine art B&W Architecture" is now synonymous with the style that they created and was widely embraced. The panel was designed to simplify the complicated manual process of making craftsmanship that is black and white more accessible to a wider audience.

The fundamentals and method of operation of the panel are evident by the design and layout style of the panel, which allows the user to study the fundamentals of the panel while learning how to make use of the panel. This is why Artisan Pro X tutorials and learning curves are more detailed. Artisan Pro X tutorials and learning curves are more thorough to give the user a thorough understanding of the essential aspects and principles of B&W photography when making use of the panel. This isn't just a simple trick, but also observing the larger picture to understand the way your vision for art can be formulated and communicated. But, you could also make use of the panel's advanced functions, but that will be a waste of the panel completely.

ARTISAN PRO CANNOT be compared with anything else.

Artisan ProX is distinct from other programs for photography post-processing. This is not only due to the fact that it is method-driven rather than feature-driven. It's also different from a technical level viewpoint: unlike other plugins and panels, the presets do not provide an exclusive shortcut to the feature that is already available in Photoshop. Each preset is a set of intricate steps to creating B&W images of fine art that require a particular sequence to be executed. Some even offer entirely new features that are cleverly built upon already-existing PS features.

The principles of art that are the foundation of this panel are the product of years of refinement, based upon close study to art, as well as B&W processing. The concepts of art are incorporated from the work of the greatest thinkers in art as well as from research conducted by scientists into the way that our brains perceive artful images.

are obtained through precisely tuned components, which are based on the existing PS features that can automate intricate sequences. These processes are complicated techniques that are not commonly found in other applications. In the sense that you are receiving post-processing created by a Photoshop master craftsman, and then tucked away in front of the simple button.
