Finduslost – India Presets Collection: The **India Collection** is an assortment of eight custom Adobe Lightroom Photo Presets I designed on our trip recently to India. Each name of the preset is an inspiration for a place or location we visited. This collection reveals the golden hues, shades of blue, and pink. It's great with architectural structures, sunsets, cities as well as nature and portraits. It can be applied to all photos to give them stunning, polished looks as in those photos on the blog and Instagram! Instagram or blog!
