

Anywhere Software Basic4IOS (B4I) v2.5

2025-01-30 13:04:15

Basic for IOS B4i provides a set of tools to develop native iOS applications. It follows the b4a code model for Android operating system programming. This allows you to reuse code to create applications for iOS and Android.

Basic4Ios, a popular tool to develop iOS applications, can be used in many other products such as B4A. This means you can create private programs with minimal effort on different platforms.

Basic4Ios was created by the creator and has been well-received so far.

The company provides a framework called B4X that allows programmers to create Android, iOS, Java, and Arduino applications.

Anywhere Software Basic4IOS (B4I) Great Features:

- Programming in a simple environment (Visual Studio) such as b4a
