Afterlogic MailBee.NET Objects v12.4 (06 Dec 2023) Retail

2024-12-27 08:36:36

is a versatile toolkit designed to help developers seamlessly integrate email functions into their .NET applications. It simplifies creating, sending, and managing emails within apps, making it a breeze to add sophisticated email features without a lot of code. The toolkit stands out by allowing developers to handle formats like Outlook .MSG and .PST files are not commonly available in open-source alternatives.

The bundle is packed with practical features for email security and management. It supports secure email sending and receiving through SSL/TLS encryption and includes components for email signing and encryption using S/MIME. Additionally, it comes equipped with tools for processing bounced messages, filtering spam, and converting email content into different formats, such as HTML and plain text.

For developers looking to customize their applications further, **Afterlogic MailBee.NET Objects** offers advanced capabilities like mail merge, which can send personalized emails in bulk, and direct sending through DNS MX lookup without needing an SMTP relay. It supports multiple authentication methods, ensuring that integration is flexible and secure across different email servers.

Key Features of **Afterlogic MailBee.NET Objects** :

1. Email Protocols: Supports SMTP, POP3, IMAP, and more for sending and retrieving emails.
2. Security Features: Includes SSL/TLS for encryption, S/MIME for email signing and encryption, and various authentication methods like OAuth2 and NTLM.
3. File Handling: It processes Outlook MSG and PST files, along with standard formats like MIME and EML.
4. Email Conversion: Converts emails to different formats, including HTML, RTF, and plain text.
