PHP Intelephense v1.8.2 (23 Feb 2022) for Visual Studio

2025-01-12 20:24:24

Intelephense is a high-performance multi-platform PHP language server that adheres to the Language Server Protocol (LSP).

If used in conjunction with an LSP powerful editor, it gives an essential set of features for code intelligence to provide a rich and productive PHP programming experience.

- Code completion. Quick and accurate camel/underscore context-aware suggestions that automatically add usage declarations.
- Signature Help. Find out more about the parameters and hints to expressions for calls.
- Go to definition. Find the definitions for symbols quickly.
- Search for all the references. Find symbols quickly inside the Workspace.
- Symbol search. Quick camel/underscore search for document symbol and workspace definitions.
- Diagnostics. Error-tolerant parser and an advanced static analysis tool will report issues while you enter.
- Formatting. PSR12 complete document format with range formatting.
- Support for embedded languages. Includes HTML/JS/CSS code intelligence too.
- Hover. Information on hovering in detail, with hyperlinks to the official PHP documentation.
- Highlight. Innovative highlighting of references as well as keywords.

PHP Intelephense for Visual Studio Great Features:

- Fast camel/underscore case **code completion (IntelliSense)** for document, Workspace, and built-in symbols and keywords with automatic addition of use declarations.
- Detailed **signature (parameter) help** for document, Workspace, and built-in constructors, methods, and functions.
- Rapid Workspace wide **goes to definition** support.
- Workspace-wide, **find all references**.
- Fast camel/underscore case **workspace symbol search**.
- Full **document symbol search** that also powers **breadcrumbs** and **outline** UI.
- Multiple **diagnostics** for open files via an error-tolerant parser and powerful static analysis engine.
- Lossless PSR-12 compatible **document/range formatting**. Formats combined HTML/PHP/JS/CSS files too.
- Embedded **HTML/JS/CSS code intelligence**.
- Detailed **hover** with links to official PHP documentation.
- **The bright highlights** of references and keywords.
- Reads **PHPStorm metadata** for improved type analysis and suggestions.
- Easy **rename** of symbols. When appropriate, files/folders are automatically renamed too.
- Accurate **code folding** of definitions, blocks, declarations, heredoc, comments, and custom regions.
- Quickly **find all implementations** of interfaces and abstract classes, and associated methods.
- Fast **go to type definition** of typed variables and parameters.
- Fast **go to declaration** for methods implementing an interface or abstract method declaration.
- Configurable **auto PHPDoc** creation that infers return types and identifies thrown exceptions.
- Syntax tree-driven **smart select** to intelligently expand/shrink selection.
- Helpful **code actions** to import symbols, add PHPDoc, and implement all abstract methods.
