By leveraging Digital Prototyping technology, users can create, visualize, and analyze products with precision before constructing physical prototypes, thus enhancing product quality, reducing development costs, and expediting time-to-market.

With dynamic simulation and stress analysis features, users can assess real-world performance and optimize designs efficiently. The software also integrates Finite Element Analysis (FEA) for accurate stress analysis and provides robust reporting capabilities. System requirements include Windows OS (64-bit), substantial CPU and RAM, and ample disk space. Notable features include compatibility with DWG files, design automation, engineering calculations, cable and pipeline design, and mold and tool design capabilities.
