

EdiFabric SDK v10.6.7 Retail

2025-04-16 16:37:50

EdiFabric SDK is a powerful and efficient toolkit tailored to simplify the management of EDI (Electronic Data Interchange) files, particularly in B2B and healthcare. With lightning-fast performance and user-friendly features, developers can access a comprehensive set of tools for parsing, generating, validating, splitting, acknowledging, representing, viewing, and documenting EDI files seamlessly. This SDK boasts wide compatibility, supporting various EDI formats, including X12, EDIFACT, EANCOM, HL7, VDA, NCPDP, EDIGAS, HIPAA, IATA, and more, catering to the diverse needs of different industries.

Designed to integrate seamlessly with C#, .NET, and ASP.NET Core, the EdiFabric SDK offers developers a versatile solution for incorporating EDI functionalities into their applications. Supporting .NET 6, .NET Core, and .NET Framework, developers can leverage the SDK's flexibility and efficiency to streamline EDI-related tasks within their development environments. Moreover, a REST API is available for EDI, allowing developers to automate file operations such as reading, writing, validation, and acknowledgement, further enhancing workflow automation and efficiency.

With a comprehensive suite of functionalities, the **EdiFabric SDK** empowers developers with the tools to handle EDI files effectively. From parsing and generating to validating and representing EDI messages, developers have access to a vast collection of customizable EDI templates exceeding 10,000. Additionally, the SDK supports seamless import and export of EDI data to JSON, XML, or CSV formats, ensuring compatibility and ease of use. The SDK offers robust support for all HIPAA messages compliant with HIPAA standards, facilitating compliance and efficient handling of healthcare-related EDI data.

Key Features of EdiFabric SDK:

1. Lightning-fast and easy-to-use developer SDK for parsing, generating, validating, splitting, acknowledging, representing, viewing, and documenting EDI files.

- 2. Supports various EDI formats, including X12, EDIFACT, EANCOM, HL7, VDA, NCPDP, EDIGAS, HIPAA, IATA, and more.
- 3. Designed for seamless integration with C#, .NET, and ASP.NET Core, and compatible with various EDI standards.
- 4. Works with .NET 6, .NET Core, and .NET Framework, providing developers with flexibility and efficiency.
- 5. REST API support for automating EDI file operations such as reading, writing, validation, and acknowledgement.
- 6. Comprehensive functionality, including parsing, generating, validating, acknowledging, and representing EDI messages.
- 7. Collection of customizable EDI templates exceeding 10,000 for versatile use cases.
- 8. Import and export EDI data to JSON, XML, or CSV formats using .NET-native serializers and flat file readers/writers.
- 9. Entity Framework-compliant templates for database creation and maintenance for all EDI formats.
- 10. HIPAA compliance with support for all HIPAA messages, HIPAA SNIP validation, external EDI codes, HIPAA databases, and large file handling.
