Entity Framework Profiler v6.0 Build 6048 (09 Jan 2025)

2026-01-12 12:49:24

Entity Framework Profiler is a powerful tool designed to boost the performance and efficiency of applications utilizing Entity Framework. Developed with input from top industry leaders in the OR/M community, it provides real-time insights into usage patterns, allowing development teams to swiftly identify and address potential bottlenecks. Through its intuitive interface, the Profiler presents concise code-review alerts with direct links to problematic code sections, streamlining the debugging process and saving developers significant time.

With a focus on cognitive application awareness, offers visual insights into the intricate interactions between database and application code. Its meticulously styled SQL output and linkable code execution provide comprehensive analysis and highlight common pitfalls associated with Entity Framework usage. This holistic approach empowers developers to optimize queries, fix performance issues, and enhance overall application efficiency.

Entity Framework Profiler boasts several notable features, including an improved user interface, enhanced performance, support for asynchronous operations, and full compatibility with .NET Core. Additionally, its seamless integration with Azure Profiling further extends its capabilities, making it a versatile solution for optimizing application performance and accelerating development processes.

Key Features of **Entity Framework Profiler** :

1. Real-time visual debugger for Entity Framework usage
2. Concise code-review alerts highlighting misuse patterns
3. Direct links to problematic code sections for streamlined debugging
4. Cognitive application awareness for visual insights
5. Meticulously styled SQL output and linkable code execution
6. Comprehensive analysis and detection of common pitfalls
7. Improved user interface
8. Enhanced performance
9. Support for asynchronous operations

所有软件资源 100%安全 已检测 无病毒 无篡改
