Devart dbForge Index Manager for SQL Server v2026.1.39 (15 May 2026)

2026-06-05 09:21:36

empowers database administrators with a comprehensive solution for addressing SQL index fragmentation effectively. By seamlessly integrating into Microsoft SQL Server Management Studio, it streamlines the process of analyzing and fixing fragmentation issues. With its intuitive interface, users gain deep insights into database index status, allowing for swift identification of areas requiring maintenance.

Devart dbForge Index Manager for SQL Server offers customizable options for addressing index fragmentation based on severity levels, enabling administrators to prioritize and optimize performance efficiently. Whether through instant rebuilds or reorganizations of indexes in visual mode or the generation of SQL scripts for future use, the process is simplified and streamlined. Additionally, the ability to export index analysis results facilitates the creation of insightful reports on fragmentation, aiding in strategic decision-making and performance tracking.

Furthermore, **Devart dbForge Index Manager for SQL Server** facilitates routine task automation through its command-line interface, enabling administrators to schedule and execute maintenance tasks seamlessly. Its support for multiple database scanning and flexible connection options ensures a holistic view of database performance, enhancing fine-tuning capabilities. With features like maintenance recommendations and auto-refresh functionality, **Devart dbForge Index Manager for SQL Server** proves indispensable for maintaining SQL Server performance at its peak.

Key Features of **Devart dbForge Index Manager for SQL Server** :

1. Get a thorough insight into the status of database indexes
2. Fix index fragmentation based on fragmentation severity
3. Rebuild or reorganize indexes based on their thresholds
4. Generate scripts to execute index-related commands

所有软件资源 100%安全 已检测 无病毒 无篡改
