Kellerman Software AccessDiff v6.0.0 (01 Jan 2021) Retail

2025-02-13 10:50:55

Access Diff has the ability to compare two databases to project with a database or able to folders other database for the user and developer. The process of comparing the access database is very easy with the help of the Access Diff. It has the ability to detect the missing objects is either of the sources or even destinations. Records are being compared based on the primary key and if there is no primary key, the comparison process is performed under natural key based on the choice of the user. After the process is performed the differences are exported into different formats. It has the ability to support the access 2000, 2002, 2003, 2007, 2010, 32bit and 64-bit databases for the user and developer easily. When the process of comparing of the access database is going on the user has to have an access version which can be installed on the user machine equal to or even higher than the access database that the user is trying to compare. If the user has the access 2003 installed on his system, then he is unable to compare the access 2007 or even the higher databases.

Kellerman Software AccessDiff Great Features:

It has the following features and attributes that are stated as below such as:

- The process of comparing the total bars along with the menu bars are possible. The custom toolbar as well as the menus are being compared and the properties along with the individual commands are being compared as well with their buttons.
- The visual elements are being compared and the code module a present is being compared too.
- The properties along with the commands of the macro are compared.
- The entire text of the module is compared and it has the ability to automatically ignore any white space differences that are present.
- The elements are being compared.
- The SQL which is between the source as well as the destination databases are compared and it has the ability to automatically ignore whitespace differences and the tables that are missing along with the subqueries are automatically being detected and logged.
- It is capable of providing a lifetime support to the user and developer through email.
- It permits the user to purchase today and get all the upgrades for free up to next year.
- It is considered to be having a standard or industry which is formatted.
- It has the ability to compare two databases with the help of the default option and export the report.
- It has the ability to support the Startup form as well of the autoexec macros.
- It has the ability to highlight the different words during the process of code comparison.
- The process of comparing of the SQL Server table along with the stored procedure and functions and finally the views.
- It has the ability to detect all the record differences that are basically based on the primary key and hence if there is no primary key for a table, the process of comparison is performed on the user chosen key which is natural.
