Hypnus Records Calculus ALP: Calculus is a Max for Live device which allows you to determine note lengths measured in milliseconds Hertz and samples based on the project's tempo.

This can be helpful with devices that don't have synced settings or if you wish to add the complexity of your settings by adding the triplet or dotted values.

Reverb decay and pre-delay Phaser modulations, delay times, LFO cycles, and compression release are just a few examples of the parameters that can give exciting and musical outcomes with the aid of this software.
