LogicNP Crypto Obfuscator For .Net 2020 Build 210317 (17 Mar 2021)

2025-05-03 16:03:39

The Crypto Obfuscator for .NET can provide a very superior protection code as well as optimization and the automatic exception reporting of the user assembly. The Crypto Obfuscator for .NET able to combine powerful obfuscation, encryption, and optimization techniques to provide the best protection to the user code of the .NET against reverse engineering for the users and the developers. The process of automatic exception reporting has the ability to make it easy and flexible to catch the unhandled exception and the exception report along with the local variable system information and the option of development has the ability to define the custom data like the files, and so on. All the reports can be downloaded automatically from the exception of reporting surveys and then viewed within the crypto obfuscators. The and the dependency which is embedding the functionality and can simplify and reduce the deployment of the user software crypto obfuscator reduction of the metadata, as well as the assembly along with the source compression. It can support the different versions of the framework of .NET and support the Silverlight, Windows, WPF, phone 8/7, portable library of the class, Mono Android, Mono touch, and also has the ability to support the Windows Phone 7 along with the automatic sign-in authentication, and it can provide the users and the developers with an improved COM support and more. The new version of it can support the portable class library and has improved support for the Mono Android and Mono touch. The Crypto Obfuscator for .NET can offer very superior security of code, optimization as well as the exception and reporting to the user assemblies. The automated exception reporting process can make it very simple in order to catch any exception and also to permit the user and the developer to report the exception for the user to use district one single Mouse click. The process of exclusion up the reports and then incorporating all of them such as the complete stack trace information along with the value of the method argument and the variables that are local, system information, and the complete stacked racing information along with the value of the method argument and finally the information which is regarding the log file and last but not least the screenshot. All the reports of the exclusion can be downloaded by the user from the exclusion reporting services and then can be seen inside the Crypto obfuscators.

The features and attributes of the LogicNP Crypto Obfuscator for .Net

It can provide the features and attributes such as the:

- The process of symbol renaming as well as the cryptographic, normal, as well as the fake and the test which is remaining the schemes.
- It provides the process of renaming an advanced overlord.
- Provides the permission for method and corruption such as hiding and encrypting of the code.
- Constant encryption of the arrays.
- Method for hiding the call.
- Control the flow of the obfuscation.
- Masking of the codes.
- Removal of the const field.
- The process of reporting the automatic exception.
- Protection for the anti-reflection.
- Anti-decompile protection.
- The process of resource and creation as well as compression.
- Digital watermarking is permitted for the users and developers for the tracking of the license.
- Optimization can happen during the runtime of the performance.
- It provides the process of embedding the assembly along with encryption and compression.
- It has the ability to reduce the metadata.
- It does the ability to protect the user's property which is intellectual from hackers, crackers as well as competitors.
- It has the ability to save a lot of time as well as money which is spent on the process of handling the development as well as the related issues.
- It is capable of improving the performance along with the quality of the user application.

所有软件资源 100%安全 已检测 无病毒 无篡改

.Net Components

- It can build a very fast, lightweight application that is also robust.
- It can support the files of the .xap as well as obfuscating.
- It has support for the command line.
- It provides full support for the process of debugging as well and the file is of the pdf.
- It is very user-friendly and has a user-friendly UI.
- It provides automatic processing for the satellite assemblies and so on.
