VisualCron Pro v9.9.12 Build 21260 (07 Nov 2022)

2025-01-02 12:01:25

VisualCron is described to be a job scheduler as well as a tool for the process of automation for the windows. It has been replacing for the Windows task scheduler as well as the similar Cron job scheduler in the operating system which is Unix-like for the user and the developer. This particular software is capable of splitting into the client as well as the server part with its former being invoked by the developer and user on demand and also has the ability to always run as a process in the background for the user. Due to the architecture which is client-server of the program the administrator in this case has the ability to use a single client in order to manage the different servers over the network that are present. The client side of it is basically a graphical program that permits the administrator and the user in order to view the logs of the activities in the software and present logs can permit the process of searching further queries that are basically event based and are able to define the type of event, the execution time will fade as well as the messages and the content along with other parameters. VisualCron consists of basically six elements such as triggers, task, notifications, expectation of the time, condition, Azalea timeout. It permits to user and developers in order to bind different options for each and every job. The VisualCron is also considered to be an integration as well as automation tool for the windows which is basically utilized by everyone all around the world. It has the ability to combine different features into one item. During the process of scheduling the user has the ability to put the jobs in order to conduct a particular time as well as occasion with the help and assistance of the triggers. The task in either of the job ultimate create as well as the removing of the human error. Through different tasks that are available the user has the ability the ultimate to tasks and incorporate the unique methods with the help of file transfer, encryption, conversion, and last but not least compression. VisualCron consists of a function with the share protocols as well as Solutions such as Amazon S3, Amazon EC2, SFTP, FTP, SCP, SSH, SQL, SSRS, Exchange, Crystal Reports, Informatics, Twitter, MySQL, Telegram, Hyper-V, SharePoint, Microsoft azure, Oracle and a lot more.

VisualCron Pro Great Features:

It has the following features and attributes that are stated as below such as:

- It does not require the user to have any programming skills as well as background in order to learn and create the tasks which belong to VisualCron.
- It is very easy for the user on the developer in order to drag and click as well as create and the interface is very consistent.
- It has a lot of customer-driven developments that are located in the feature request from the customers and Developers.
- It has the ability to provide a fast as well as an accurate support to all the users and a developer along with the windows environment in general.
- With the help of the VisualCron audit the job as well as the task logs along with the output for the task have enough information for the process of debugging.
- It has to interact with anything and has the power to use the common protocols for the transferring of the files and execution of the scripts.
- It consists of a price tag for everyone and it is very affordable for the user and developers to purchase and maintain.
- It is able to save a lot of time and money for the user.
- The process of elimination of the human error is possible with the help of the VisualCron by the process of automation of the advanced tasks.
- It has the ability to react as well as control the flow based that are basically error type and output.
- It has the ability to interact with the VisualCron easily and flexible right on the programming level with a used of the API.
- It is considered to be very affordable and pocket friendly.
- The administrator of the VisualCron the ability to use a single client in order to manage a lot of servers over the network.
