GleamTech FileVista v10.1.0.0 (06 Apr 2026) Retail

2026-05-18 09:50:57

GleamTech FileVista is File Manager to Get Self-Hosted File Sharing.

Turn your website into an internet file server in a few seconds.

- Share documents with your customers or staff on your internet site.
- Shop your confidential documents on your server and have complete control over them.
- Enable your customers to access, upload safely, and organize documents from anywhere with just a web browser.
- Preview files (70+ document formats, such as PDF & Microsoft Office), pictures, audios, and videos.

FileVista is a program for uploading files on the server and subscribing to customers. In reality, this plan will turn your site into a dedicated file server. It's possible to easily upload documents, such as pictures, videos, audio files, Word documents, Excel, PowerPoint, ebooks, and any document into the server and discuss it with your users without a hassle. All files have been shared and which documents are only available for you, which documents are encrypted, and which documents are publicly available are under your own control.

FileVista also lets you add attributes to your site so that your customers can upload their documents and assist file server growth. This program can open over 70 distinct formats, such as text files, PDFs and Office documents, images, video, and audio. This means that your users don't have to set up Office and PDF reader and other side apps to open these files. The program displays all of the files with its very own dedicated players. Users may zoom in and out of files. Vector files can also be opened via this system. The program environment is quite straightforward and looks just like a Windows Explorer. Therefore, after installing, you will have to understand all the characteristics in just a small while.

- Spectacular and Intuitive User Interface

  The document manager appears and feels just like Windows File Explorer and follows user interface instructions. Let your customers easily manage their documents and the intuitive and comfortable approach known from the daily desktop operating environment and decrease the user learning curve.

  Actions are represented on the ribbon (upper) toolbar and at the context menus, and they're mechanically disabled/hidden when not accessible, e.g., when corresponding permissions aren't granted. This way, users will only observe the activities offered to them and won't be confused.

  Navigation (folders) pane enables the rapid hierarchy browsing and breadcrumb navigation bar to keep an eye on the place and then drill folders easily.

  Folder contents are displayed using a multi-view that supports 6 different perspective designs: Extra large icons, Big icons, Moderate icons, Small icons, tiles, and Details. Thumbnails for all frequent video and image files are displayed. For other document types, high-res icons are shown.

- View Any Document Anywhere

  Advanced Document Viewer can open and exhibit (read-only) a broad Array of document file formats (70+):

  - Microsoft Word
  - Microsoft Excel
  - Microsoft PowerPoint
  - Microsoft Visio
  - Microsoft Project
  - Microsoft Outlook
  - OpenDocument Formats

所有软件资源 100%安全 已检测 无病毒 无篡改

标签

ASP.Net Components .Net

- AutoCAD Drawings
- PDF
- XPS
- Scanner Pictures (Tiff, DjVu, DICOM)
- and much more...

Your customers do not have to get a program (e.g., Microsoft Office) on their personal computer to have the ability to see these records.

The Document Viewer supports High Placement. Fonts, text, and vector components are maintained and left in high-res without rasterization. Zoom in as far as you need; your files will look great as well as they perform from the app that generated them.

- Perform Video and Audio Files

  Media Player can play and open all Frequent formats:

  - MP4, M4V
  - F4V
  - MOV
  - FLV
  - WEBM
  - OGV
  - and onto several browsers MP4V, 3G2, 3GP, MKV

  And all frequent audio formats:

  - MP3
  - AAC
  - M4A
  - F4A
  - OGG, OGA
  - VORBIS

  Media Player will try the Html5 movie quality of the browser, and when not supported, it's going to attempt Flash mode. In case a media format isn't working whatsoever on the browser, the media player will prompt the consumer to attempt opening the document right on his computer/device so that you have a streaming media server.

- View Picture Files

  Picture Viewer can display all Frequent image formats such as Photoshop:

  - Jpeg
  - Png
  - Gif
  - WebP
  - Bmp
  - Tiff
  - Tag
  - PSD, PSB
  - Raw (Digital Camera Picture) Formats

  Picture Viewer supports zooming, panning, rotating, and switching. Transparent graphics will be exhibited with a wonderful background pattern to distinguish them from pictures with good color backgrounds.

- Browse Archive Documents

  The contents of common archive formats may be navigated like folders:

  - ZIP
  - 7Z
  - RAR
  - TAR
  - GZ
  - TAR.GZ (TGZ)
  - TAR.BZ2 (TBZ, TBZ2)

  This is comparable to"Compressed Folders" from Windows Explorer but for many archive formats, not only for format. Additionally, it supports displaying thumbnails while in the archive and supports surfing nested archive files so that it's more sophisticated than Windows Explorer's attribute.

  The zip files may be altered, but other formats are uninstalled. It is possible to instantly upload to zip files and download documents right from all of the archive files by way of instance.

- Advanced Uploads

  Upload multiple files or even entire folders simultaneously. Upload by dropping and dragging directly from your PC. Upload documents of unlimited size (e.g., a 10 GB big file).

- Advanced Downloads

  Download several files or even entire folders simultaneously. When downloading one file, pausing/resuming from the

browser is potential so interrupted downloads could be completed—download documents of unlimited size (e.g., a 10 GB big file).

- Pick Where You Store Files

  Store your files on the local server or onto the system without changing your current folder structures. Produce root folders that point to existing avenues and begin serving documents instantly.

  You can specify 2 Kinds of folders:

  - Physical origin folder that can point to one of these:
    - An area route, e.g., d:\documents
    - A community route (UNC), e.g. \\server\discuss
    - An application-relative route, e.g. ~/App_Data/RootFolder1
    - An electronic route, e.g. /webfolder/test
  - Amazon S3 origin folder that points into a bucket

  It is possible to link with network folders or procured local folders through specific credentials or authenticated Windows users.

  Dynamic root folders can be produced using the predefined variables undefined, undefined, and undefined. By Way of Example, you can create a root folder called"undefined's home folder" with the place"D:\AllUsers\undefined" and if an individual named Joe logs in, He'll visit a root folder called"Joe's house folder," which reveals the contents of"D:\AllUsers\Joe."

- Share Documents with Access Control

  Create user accounts and groups. Restrict actions, disk utilization, and file types on folder foundation for groups or users.

- Permit Public Access Permit users to generate links (direct URLs) for assigning the documents in different programs, in files, or mails. Let users restart interrupted downloads through links.
- Administrate Hassle-free Handle and configure all aspects of your internet file server together with the web-based management panel. Assign Group Managers and allow them to administrate members of their own group.
- Monitor Everything Track and audit each activity of the users, together with all the event viewer. Get and allow the users to get email notifications in case of actions.
- Empower Seamless Access Around Devices and Browsers allow your customers to access your internet file server by using their selection of an internet browser on Windows or Mac or even a cellular device. It's not necessary to require users to set up any applications like FTP customers.
- Offer Localized accessibility to Users. Let global access for your internet file server. Enable your customers to pick their favorite language. Insert a new language or customize a present language readily.
