Atlassian FishEye Enterprise v4.7.0

2025-03-04 11:56:25

FishEye supplies a read-only window in your Subversion, Perforce, CVS, Git, and Mercurial repositories, all in 1 area. Keep a heartbeat about your code: Visualize and report on the action, incorporate resources with JIRA issues, and hunt for info, files, adjustments, or individuals.

Picture and report on activities and hunt for commits, documents, revisions, or teammates around SVN, Git, Mercurial, CVS, and Perforce.

View changes using a side-by-side or merged diff tool and connect your Jira Software issues right to diffs, changeset information, or complete origin.

Picture: Obtain a graphical representation of action on your origin, report on code lines with time, and receive a visual audit trail of modifications.

Track: Follow what is happening throughout your endeavors with action flows revealing commits, Jira Software problems, and Crucible review tasks across your group.

Hunt: Locate code quickly with search utilizing any artifact on your code: document titles, commit messages, writers, text, as well as historical alterations.

Diff instrument: Understand what is changing in your code using side-by-side or unified diff for SVN, Git, Mercurial, CVS, and Perforce.

Activity flows: Practice just what's happening during your projects in real-time together with action streams revealing commits, Jira Software problems, and Crucible inspection actions.

Code hunt: Accurately look through your code with file names, partial paths, wild cards, user names. Jira Software issues keys and even phrases to proceed directly to a directory, file, or graph.

Jira Software integration: Close to the loop to get traceability between code changes and problems when joining Fisheye into Jira Software.

Smart commits: Perform activities on Jira Software problems or Crucible code testimonials with the addition of easy syntax for your commit messages.

Real-time alarms: keep on top of all of the action on your endeavors with customized notifications.

Construct integration: View that code varies a construct when you join Bamboo using Fisheye.

Reports and records: Keep stakeholders informed with graphs and code metrics that reveal lines of code (LOC) dedicated, high committers, the number of modifications on the job through its foundation, and much more.

Document history: View the background of a document in the document history perspective, and immediately jump into your diff or annotated view for additional information.
