ManyCam v9.3.0.11

2026-07-30 16:32:16

ManyCam is a versatile virtual camera and live streaming software designed to elevate both video conferencing and live streaming experiences. With seamless integration with popular video conferencing apps like Zoom, Webex, Microsoft Teams, and Google Meet, **ManyCam** empowers users to enhance their virtual meetings, presentations, and video chats with features like customizable picture-in-picture layers, media switching between scenes and sources, and support for various camera angles and mobile devices.

offers comprehensive functionality for live streaming, enabling simultaneous broadcasting to multiple platforms such as Facebook, YouTube, and Twitch through multicast or RTMP streaming. Users can utilize their mobile devices as additional camera angles and easily record the main live window with just a click, ensuring a professional and engaging live streaming experience.

Moreover, **ManyCam** enhances virtual interactions with virtual background capabilities, allowing users to blur, remove, or replace backgrounds without requiring a green screen. With high-quality background images and videos, optimized AI for superior background removal, and support for custom background sources, **ManyCam** adds visual appeal to web conferences, video chats, and virtual classrooms. Its picture-in-picture layers feature enables users to create customized layouts on their live windows, with resizable layers, transform tools, and layout presets offering split-screen options. Additionally, **ManyCam** seamlessly connects to various platforms, apps, software, and services, serving as the ultimate video and audio source for diverse user needs.

Key Features of **ManyCam**:

1. Seamless integration with popular video conferencing apps like Zoom, Webex, Microsoft Teams, and Google Meet
2. Customizable picture-in-picture layers for enhanced visual presentations
3. Media switching between scenes and various sources for dynamic content delivery
4. Support for camera angles, mobile cameras, documents, and NDI®
5. Simultaneous broadcasting to multiple platforms such as Facebook, YouTube, and Twitch
6. Multicast and RTMP streaming for efficient live streaming
7. Use of mobile devices as additional camera angles and for remote control during live streams
