Stimulsoft Reports Web v2026.2.2 for ASP.Net & Core & MVC (.Net 4.7 to 10)

2026-07-31 17:54:39

Stimulsoft Reports Web is a full-fledged reporting solution that enables you to create, edit, view, print, and export reports directly in a browser. It works with popular technologies such as ASP.NET, ASP.NET MVC, .NET Core, Angular, Blazor, and Python. The product is a combination of a strong . A reporting engine for the web with an intuitive HTML5-based report designer and an efficient interactive report viewer for simple business reports as well as for complex reporting systems.

Because it is a client / server system, reports are accessed with a modern web browser. The client side is composed of HTML5 and JavaScript, and the server side is leveraged on the flexibility and performance of the .NET platform. Reports can be connected to a variety of databases, cloud services, APIs, and file formats such as SQL Server, MySQL, PostgreSQL, Oracle, MongoDB, JSON, XML, Excel, CSV, Google Sheets, Azure services, GraphQL and more.

Stimulsoft Reports Web is also easily integrated and flexible for deployment. Complicated extra modules are not required but can be added to your applications either by NuGet packages or by the included libraries. Stimulsoft reports can be used with other Stimulsoft products, and finished reports can be exported to common formats like PDF, HTML, TXT, image formats, and other common formats. It becomes a convenient method to create professional reporting capabilities in contemporary web applications.

Key Features of **Stimulsoft Reports Web** :

1. **Web-Based Report Designer** – Create new reports or edit existing templates directly in the browser using an intuitive HTML5 interface.
2. **Royalty-Free Embedded Designer** – Integrate the report designer into your own software without paying separate deployment fees for every end user.
3. **Interactive Report Viewer** – View reports with support for parameters, drill-down navigation, interactive elements, resource handling, and other advanced features.
4. **Cross-Platform Operation** – Use reports on different operating systems and devices through a modern web browser.
5. **Broad .NET Compatibility** – Supports .NET Framework 4.5.2 and later, as well as modern .NET versions including .NET 6, .NET 7, .NET 8, .NET 9, and .NET 10.
6. **Multiple Framework Integrations** – Designed for ASP.NET, ASP.NET MVC, .NET Core, Angular, Blazor, Python, and other supported application environments.
7. **Extensive Data Connectivity** – Connect reports to relational databases, NoSQL systems, cloud services, APIs, OData sources, and file-based data.
8. **Data Preparation Tools** – Transform information, create virtual data sources, combine data, and embed resources directly into report templates.
9. **Easy Application Integration** – Add reporting features through NuGet packages or product libraries without complex extensions or additional modules.
10. **Server-Side Report Control** – Manage report loading, data binding, processing, printing, and exporting through application code.
11. **Cross-Product Compatibility** – Open and edit report templates across compatible Stimulsoft desktop, web, cloud, and other reporting products.
12. **Wide Export Format Support** – Export completed reports to PDF, HTML, TXT, image formats, and many other document formats.
13. **PDF Security Features** – Generate PDF documents with options such as encryption and digital signatures.
14. **Customizable User Interface** – Adjust viewer themes, appearance, controls, and functionality to better match your application.
