GoldView is an application that allows you to browse schema structures. It provides information about the properties and structure of schema objects. It is a tool that reads only. It's useful for those who wish to understand the schema's elements but don't wish to write database queries. It also allows the safe browsing of schema data without fear of damage to the database.

Goldview is an excellent tool that displays detailed information about the structure of schema objects in the Oracle database. Goldview is an ideal tool for developers that want extensive schema information but aren't keen on creating lengthy data dictionary queries. Utilizing Goldview, users can access details about table views, views, triggers indexes, sequences, synonyms codes, and types in a couple of clicks. Goldview displays critical structures, structure constraints, stored code triggers, indexes, examples of data, and more. That is related to schema objects. Goldview shows data within the view of spreadsheets. It allows users to print out information about the structure. The results are that Goldview provides the most common options, including cutting, copying, pasting, resizing, and searching. One of the best advantages of Goldview is that it saves data on a clipboard in an Excel spreadsheet format that can then be directly pasted into Excel and other spreadsheets—Chema information without having to worry about causing damage to the database.

Goldview is simple in appearance and highly user-friendly. It offers users an Object Tree containing the database's objects list and allows users to choose these objects to obtain more precise details. Goldview allows users to sort tables and views in structures and display data samples. It also lets users browse DDL scripts that can be used to create schema objects. Goldview is a read-only software that allows users to navigate schema information safely without worrying about accidental damage. The tool is simple to use and is available for free.
