Raize Software Inspex v2.7.1 for Delphi 10-13 Florence Retail + Serial Number

2025-10-09 20:39:33

presents a versatile suite of native VCL grid controls tailored to facilitate the inspection of objects and diverse data types within software applications. With a range of inspector controls, Inspex caters to various needs, from editing lists of name-value pairs to scrutinizing published properties of objects and components.

The TIxItemListEditor offers a specialized grid interface for efficiently editing item collections, allowing for managing name-value pairs with customizable attributes. It empowers developers to create hierarchical structures and facilitates seamless editing through dropdown lists or custom dialogs, enhancing data organization and manipulation.

For more sophisticated customization and type safety, the TIxItemListInspector extends these capabilities, enabling the association of types with items for enhanced editing behaviors and property presets. Meanwhile, the TIxObjectInspector automates object inspection, effortlessly populating control's Items collection based on scanned properties, and categorizes them into common groups, offering additional features such as direct editing of string list and collection properties, calculated properties, and customizable filters. These controls empower developers with comprehensive data inspection functionalities, streamlining the development process and enhancing software quality.

Key Features of **Raize Software Inspex** :

1. TIxItemListEditor: Specialized grid control for editing collections of name-value pairs
2. Hierarchical structure support for nested items and customizable attributes
3. TIxItemListInspector: Extends editing capabilities with type association and property presets
4. TIxObjectInspector: Automates object inspection and populates control's Items collection
5. Categorization of properties into common groups for easy navigation
6. Direct editing of string list and collection properties
7. Support for calculated properties and customizable filters
8. TIxDBInspector: Designed for inspecting datasets, automatically populating Items collection with fields
9. Hierarchical data access and support for mixing non-data-aware and data-aware items
10. Filtering and categorization of fields for efficient dataset inspection

所有软件资源 100%安全 已检测 无病毒 无篡改
