JMMGC Broken Link Scanner v1.50

2024-12-31 14:12:23

The "" is a Windows-based tool designed to help keep your website running smoothly by detecting broken links and redirect chains. Broken links can frustrate visitors and harm your website's ranking in search engines, while redirect chains can slow down your site's performance. With this tool, you can easily scan your website, receive a report of all broken links and redirect chains, and export the results to a spreadsheet for further review.

This tool is built for simplicity and efficiency, requiring no technical expertise. A user-friendly interface and helpful guides allow anyone to quickly identify issues affecting their website's user experience and search engine performance. By fixing broken links and optimizing redirect chains, your website can load faster and provide a better experience for visitors.

Key Features of **JMMGC Broken Link Scanner** :

1. Broken Link Detection: Easily find and fix broken links that negatively impact user experience and SEO.
2. Redirect Chain Detection: Detect and resolve redirect chains that slow down your website's loading speed.
3. Easy to Use: The tool's intuitive interface and helpful guides make it accessible even to those without technical knowledge.
4. Exportable Reports: Generate detailed reports that can be exported and viewed in spreadsheet programs for easy tracking and management.
