XML Signer v6.0

2025-01-06 22:58:26

XML Signer's primary function is signing XML documents with X.509 certificates. This software can sign fast multiple XML documents (bulk signature) by choosing the output and input directories. This is perfect for batch signing many corporate XML documents instead of signing each individually.

XML Signer lets you create and sign XML documents without purchasing additional software. Indeed, doing this can dramatically lower your Total Cost of Ownership (also called TCO).

Interoperability Signatures generated with XML Signatures can be checked using the standard XML Viewer.

PKI Interoperability - This application is PKI neutral and can work alongside PKI parts from any manufacturer (including certificates, CAs, CRLs, smartcards, etc.).

Requirements:

■ .NET Framework 2.0

XML Signer (XAdES) main function is to sign XML documents using X.509 digital certificates. Using this product, you can quickly sign multiple XML files (bulk sign) by selecting the input and output directory. This is ideal for batch signing of many corporate XML documents rather than signing each individually.

XML Signer allows you to sign XML documents without purchasing additional software.

PKI Interoperability – XML Signer is completely PKI neutral and will work with PKI components from any vendor (including CAs, certificates, CRLs, smartcards, etc.).

Standard Compliance – XML Signer signatures are compatible with XAdES-BES and XMLDSig format.

Hash Algorithms – XML Signer can use SHA-1, SHA-256, and SHA-512 algorithms.
