What is Zone System Express Panel?

The Zone System Express Panel is a tool used in photography, particularly in the realm of black and white photography, to aid in controlling exposure and development. It's derived from the Zone System, a technique pioneered by Ansel Adams and Fred Archer, which involves assigning different zones of brightness to different parts of the scene, from pure black (Zone 0) to pure white (Zone X). This allows photographers to precisely control exposure and achieve the desired tonal range in their images.
