

KS DB Merge Tools for PostgreSQL Pro v1.19.0

2026-07-01 08:59:14

Synchronizing two or more databases may appear daunting, but a specialized tool like KS DB Merge Tools for PostgreSQL is valuable. This application is tailor-made for PostgreSQL databases, streamlining the process of synchronizing and comparing schema and data.

The main graphical user interface of KS DB Merge Tools is thoughtfully designed to facilitate side-by-side comparison of two PostgreSQL databases. Setting up connections for each database in separate panels is a breeze. Upon connecting to PostgreSQL, the tool efficiently populates the tables with database objects, providing a clear summary of totals and new and modified items in the database schema.

This tool also offers a concise summary of data changes within tables and views and excels in handling table schemas. KS DB Merge Tools for PostgreSQL meticulously highlights all disparities in data, whether they are new entries or alterations. Additionally, the tool enables the comparison of records in tables and facilitates the merging of changes with minimal effort.

In essence, KS DB Merge Tools for PostgreSQL compares the schema and data between two distinct PostgreSQL databases. It covers various database elements, including tables, views, procedures, functions, and sequences. You can use this tool to compare data across multiple tables and views, and it even allows you to apply filters to uncover new and modified items, making it effortless to merge modifications in both directions.

KS DB Merge Tools for PostgreSQL Pro Great Features:

- Compare schema and data
- Quick filters to show all/new/changed/new+changed
- Merge changes in both directions
- Lightweight: less than 10 MB
- Free version with basic features, available for commercial use. No credit card, no registration, no ads, no hidden telemetry.
- Pro version with a whole set of features at a reasonable price
