Building Enterprise ASP.NET Core 6 Blazor Applications - Dino Esposito

2025-04-01 20:02:16

is a comprehensive course designed to advance your Blazor skills from basic to realistic web application development. The course equips you with the essential knowledge to construct sophisticated Blazor applications for line-of-business scenarios. You will learn how to effectively organise the server architecture, ensuring modularity and clear boundaries between layers. This course goes beyond the fundamentals, teaching you how to configure Blazor applications effectively, manage forms securely, and validate user-submitted data.

Building Enterprise ASP.NET Core 6 Blazor Applications - Dino Esposito begins with exploring architecting a line-of-business app with Blazor, offering valuable insights into creating modular and organized server architecture. Then, it delves into setting up a realistic application template, providing a comprehensive understanding of the necessary configurations to kickstart your Blazor application. Moving forward, you'll learn to restrict access to application routes, collect data from users securely, and validate received input, ensuring data integrity. Finally, with the skills obtained from this course, you'll be fully prepared to plan and rebuild any Blazor application in a line-of-business scenario, making it a valuable resource for beginners and experienced developers.

Building Enterprise ASP.NET Core 6 Blazor Applications Table of contents:

1. Course Overview (Duration: 2 mins)
