What is ZBrush- Face IMM + VDM Bundle?

Pixologic's ZBrush is a digital sculpting and 3D modeling software widely used in the entertainment industry, especially in the fields of video games and film. "IMM" stands for Insert Multi Mesh and "VDM" stands for Vector Displacement Map. These are both features within ZBrush that have significant utility in character modeling and sculpting.

The "Face IMM + VDM Bundle" you mentioned might be a collection of IMM brushes and VDMs specifically designed for creating facial details in character models. These bundles can save artists time and provide a library of assets and tools that make character modeling and detailing more efficient and realistic.
