TX Text Control ActiveX v32.0 (07 Sep 2023)

2025-05-14 12:46:24

is a versatile and royalty-free document processing solution tailored for Visual Basic 6 and COM-based languages. It empowers developers with a comprehensive suite of word-processing features seamlessly integrated into their applications. With TX Text Control, you can effortlessly incorporate fully-featured document editing capabilities, including extensive text formatting, robust mail merge functionalities, and support for essential word processing elements such as tables, images, headers, and footers.

One of the standout features of TX Text Control is its robust reporting and mail merge capabilities. **TX Text Control ActiveX** seamlessly merges the power of a sophisticated reporting tool with the ease of use of a WYSIWYG word processor, offering developers the flexibility to create dynamic reports with flow-type layouts. The integration of MS Word-compatible templates and support for various data sources streamlines the report generation process, enabling the creation of nested repeating blocks, master-detail reports, and more.

Moreover, TX Text Control ensures compatibility with a wide range of word processing formats, including Office Open XML, MS Word, Rich Text Format, HTML, and Adobe PDF. This compatibility allows for seamless conversion and modification of different document types, empowering users to manipulate MS Word documents and generate Adobe PDF files directly within your ActiveX application. With its intuitive interface and extensive feature set, **TX Text Control ActiveX** offers developers a powerful solution for implementing sophisticated document processing capabilities in their applications.

Key Features of **TX Text Control ActiveX** :

1. Comprehensive text formatting
2. Powerful mail merge

Components Java & ActiveX

3. Support for all word processing key concepts
4. Collaboration features (track changes, comments)
5. MS Word-compatible templates
6. Use of JSON or any IEnumerable object as data sources
7. Creation of nested repeating blocks
8. Integration of master-detail, side-by-side, and sub-reports
9. Support for various word processing formats: Office Open XML (DOCX), MS Word (DOC), Rich Text Format (RTF), HTML, Adobe PDF, PDF/A
10. Division of documents into unlimited sections with individual formatting
11. Mixed page orientation within documents (portrait and landscape)
12. Addition of different headers and footers to specific sections
13. Inclusion of page numbering selectively
14. Insertion of any number of columns into documents
15. Support for background images with various positioning options
16. Compatibility with multiple image formats: WMF, EMF, BMP, GIF, TIF, PNG, JPG, DICOM (DCM, DC3, DIC), Photoshop files (PSD)
17. Use of Windows Imaging Component (WIC) for image processing
18. Insertion of images directly from the .NET System.Drawing.Image objects
19. Insertion of DICOM or Photoshop files with specific installed codecs
20. Insertion of different headers and footers for each available page section
21. Support for odd and even page headers
22. Ability to add different first-page headers and footers
