SubSystems DOC to RTF Converter v12.0 for .Net

2025-01-01 22:15:57

DOC to RTF Converter delivers a very simple and hassle-free way of switching from the DOC into the RTF format inside your program. You may make only 1 function call to perform the conversion.

No additional external elements or programs will be needed if you use this specific converter. The converter comprises a highly effective DOC parser to offer you a cost-efficient, feature-rich, and powerful translator.

DOC to RTF Conversion supports the following attributes:

- Conversion from DOC to RTF format.
- Fonts, point-size, various personality designs, and colors.
- Paragraph formatting attributes like centering, justification, indentation, etc...
- Support for PNG, JPEG, GIF, EMF, and WMF picture formats.
- Embedded and related images.
- Support for contour objects.
- Headers/footers.
- Table and nested tables.
- Unicode support.
- Set paper size, orientation, and perimeter distance for RTF output.

Code Output: The created RTF code could be written to a disc or it may be recovered in a memory buffer. The RTF data recovered in a memory buffer could be loaded into an RTF edit controller, for example, TE Edit Control.

Programming Interface: Your program only uses function calls to perform the conversion. The Win32 version comprises the purpose and constant declaration documents for C/C++, Visual Basic, and Delphi. The item is usable in almost any environment that allows for phoning easy DLL functions.

The .NET version may be used inside a Windows Form application or an ASP.NET server program.
