TEC-IT Barcode Studio v17.1.1.30778

2026-03-04 13:35:59

Barcode Studio provides a quick and straightforward method to create quality barcodes (e.g., Bitmap format or Vector Format for Press print) without programming. Barcode templates that are ready-to-use support the creation of standardized barcodes.

Barcode Studio is a professional software program designed to assist you in creating barcodes.

It is a clean and straightforward layout that offers you the option of choosing among a variety of barcodes and templates.

Barcode Studio allows you to define the barcode's data and convert it to the format of hexadecimal, select the resolution and size of the barcode, display or hide the text, and alter the text's appearance in terms of colors, fonts, and alignment.

Additionally, the app is loaded with advanced options that are explicitly designed to help you select the encoder mode and customize the barcode's design by adjusting the bar's size and height, as well as additional options.

The program lets you alter the transparency and color as well as rotate the barcode in various angles and even embed logos by uploading photos directly from your computer. Furthermore, logos are customizable by adjusting transparency, color, alignment, and size.

You can add up to four captions for text and zoom in and out, take a print of the barcode, save it onto the Clipboard, or export it into BMP, GIF, JPG, PNG, TIF, PDF, or EPS format.

One of the most impressive features included in Barcode Studio is an intelligent system that can analyse the barcode and then provide information about its legitimacy (e.g., deviation, quality, resolution).

Not to be left out, you can import barcode information from CSV or text format, run command-line functions and preview barcodes and configure the specific specifications for creating labels.

In our tests, we've discovered that the tool has the outstanding image quality, and there was no evidence of errors. It does not put much stress on the CPU or memory, and the system's overall performance isn't affected.

Overall, Barcode Studio offers a helpful set of parameters aiding users in the design of barcodes. Due to its advanced features, it's ideal for professionals.

TEC-IT Barcode Studio Great Features:

The required barcodes are edited and adjusted right on your computer screen, and no specific knowledge is required. The barcode output happens on the Clipboard or directly to your printer as a picture (BMP, GIF, JPG, TIF, PNG) or vector graphics (EPS PDF PostScript(r) and SVG AI).

Barcodes generated by the scanner can be used instantly to Add barcode graphics to image editing programs, databases, or forms, as well as documents.

A unique feature provided through Barcode Studio is an inbuilt high-quality preview. The expected quality of barcodes is determined in real-time by displaying the printing tolerance relative to the output's resolution (DPI). Therefore, barcodes that are not readable are eliminated.

Barcode Studio offers various possibilities to create a sequence of barcodes. You can create serial numbers on your own or import barcode-related data from other files (TXT CSV or TXT files). Additionally, Barcode Studio offers a fully-featured command-line interface that allows batch operations (silent mode) and integration with third-party applications (like Oracle Reports).

Applications Tools

Barcode Studio contains barcode templates for immediate use for EAN-13, EAN-8, UPC-A, UPC-E, and Deutsche Post Data Matrix Premiumadress. In these templates, all barcode configurations are precisely by the specifications.

With an assistant, the input of barcode information for 2D barcodes can be significantly reduced. Mobile barcodes that tag URLs to LinkedIn, Twitter, Facebook, or web pages can be created in the same way as bars for business cards, in vCard and MeCard format. If necessary, URLs are reduced (and monitored) through Google or Bitly's URL shortener and tracking services.

For industrial users, predefined application identifiers (AI) aid in designing GS1 barcodes. The data assistant takes charge of the proper FNC1 inserts.

Create attractive bar codes in a matter of minutes. It is possible to include logos in your barcode images. Furthermore, drawing effects with special effects (like circles or rounded rectangles, images) are also supported.

To print barcodes created by barcode printers, the user can select from predefined templates or create custom labels according to requirements. Barcode Studio provides templates like Avery or Avery/Zweckform.
