Description

Welcome to this class. I'll show you how to transform one form into another in this class. Perhaps you're wondering what exactly is the process of morphing. It is a process that allows one object or shape to transform into another object seamlessly.

Two ways can be used to transform a form, and we'll be learning the two methods in this course. We will first be taught the basics of morphing. Then, we will transform phones into computers. We will discover how to build a solid device first. Then we will focus on how to bridge the gap between your phone and the computer. We will solve the typical issues you could face in this class. We will be taught how to make second animations of our characters. How can we make our animations have an excellent feeling? We will discover how to make smooth movements in transitions using the aid of graph editors.

This course is ideal for those who have a basic understanding of aftereffects. What I mean by that is that you must at least be able to set an initial keyframe or play with layers to be able to comprehend the course more. However, don't worry about it. I've provided the basics as comprehensively as I can. So even if you're a novice, you shouldn't have difficulties.
