"Organic Lifeform Textures" from Bluezone Corporation is an inspirational sound effect library that offers 99 ( 24 bit/96 kHz/ Stereo ) strange and fascinating sounds: From gigantic creatures to tiny insects surprising groans to invertebrate species traversing through the mud. This SFX library offers extremely high-quality malleable textures to use in all your projects. The sample pack that is available for download is extremely useful for professional editors music producers, filmmakers, and video game sound designers.

The sound effects were recorded from different sources and then processed with high-end equipment. The sound effects are combined to provide you with ready-to-use elements. You can easily alter the pitch, modulation the sound, manipulate and stretch the sounds to make many variations. Organic Lifeform Textures is designed to improve science fiction, mystery-suspense, and fantasy games or scoring applications. Please note that the background music that is featured in the demo isn't part of the software however it is included free of cost.

### Ginno Legaspi review - SoundBytes Magazine :

Organic Lifeform Textures is an extensive collection that reproduces the sounds of animals as well as insects and other amazing life forms that are a mystery to us. The goal of the library has is to provide an array of surprising and unusual sound effects to television, video games, and film, trailer, or ambient music composers. Like all of our other sample packs, this inspiring sample pack comes in a premium Bluezone manner. The 99 samples included are all contained in one folder. They are designed to provide producers with a premium 24 bit/96 kHz collection of materials to use for post-production.

Many of the samples that sound off-kilter provide endless ideas for sci-fi-thriller music. The longer versions are able to be further altered or distorted, as well as pitch-shifted to make them more creative. As with many Bluezone releases, it is yet another innovative library that has been well-programmed.
