The program looks intimidating, and the courses that you've seen are too technical and you're watching unrelated tutorials every day The courses are too long, and you're bored. I've been in the same situation and that's the reason I've developed this course to help you learn After Effects in an approach that is practical and fun.

In this course, you'll be taught After Effects through the creation of an original Christmas Themed Animation in less than two hours.

More than that I've created more than 100 of these types of animations for commercials on TV. You'll be learning how to use the tools in a hands-on manner and will also develop a valuable ability that you can later market to your customers.

My aim is to share my expertise with you so that you can be a successful animator.

Learn how to cut out objects with Photoshop and how to create animations using After Effects, Techniques by an expert with over 10 years of experience working in this field. You will be able to add Effects to your collection, and install the most useful plugins, learn how to export your images for television and social Media, and much more.

Learn all techniques by making a Chrismas animated Christmas-themed animation.

The structure is a little different from other classes. Instead of switching between different concepts in each video and displaying examples that do not have anything to do with each other The course will teach us everything by doing.

For the final test, you'll need to create your own animation, take photos at home, and then recite what you've learned during the course.
