NHibernate Profiler v6.0 Build 6048 (09 Jan 2025)

2026-01-12 12:48:46

NHibernate Profiler offers a transformative solution for optimizing NHibernate-based applications. With real-time visual debugging, development teams gain invaluable insights into their code's performance, efficiently identifying bottlenecks and query optimizations. Developers can streamline their optimisation efforts through concise alerts and direct links to problematic code sections, saving time and enhancing application performance.

Experience enhanced cognitive application awareness with 's visual insights into database-application interactions. Its meticulous analysis, presented through stylized SQL output and clickable code execution, ensures a seamless debugging process. With support for NHibernate versions 1.2.x through 5. x, the tool caters to diverse development environments, empowering developers to unlock the full potential of their applications.

The latest UI enhancements, improved performance, integration with async/await support, and Azure profiling further elevate **NHibernate Profiler**'s capabilities. By leveraging industry expertise and cutting-edge technology, developers can accelerate development cycles, save countless hours, and confidently deliver high-performance NHibernate applications.

Key Features of **NHibernate Profiler** :

1. Real-time visual debugging
2. Identification of bottlenecks and query optimizations
3. Concise alerts with direct links to problematic code sections
4. Enhanced cognitive application awareness
5. Visual insights into database-application interactions
6. Meticulous analysis presented through stylized SQL output
7. Clickable code execution for seamless debugging
8. Support for NHibernate versions 1.2.x through 5.x
9. UI enhancements for improved user experience
10. Integration with async/await support
11. Azure profiling integration for enhanced functionality and performance

所有软件资源 100%安全 已检测 无病毒 无篡改
