RavenDB Enterprise v7.2.1 (17 Mar 2026) Multi OS + All Features

2026-04-09 22:00:30

RavenDB Enterprise is a high-performance NoSQL OLTP Document Database known for its simplicity, clustering capabilities, and robust features. Real-time replication across multiple nodes ensures data safety and constant availability. Supporting up to 150,000 writes and over one million reads per second, it is ideal for mission-critical applications on platforms like Windows, Linux, Mac OS, and Docker. Compatible with various programming languages, including .NET, PHP, C++, C#, Java, Python, Ruby, Go, and Node.js, **RavenDB Enterprise** offers ACID compliance, advanced querying, and a multi-model architecture.

Key features include an intuitive Database Management Studio, seamless integration with relational databases, and support for time series functionality. Beyond its core features, RavenDB Enterprise excels in high availability, operational stability, and straightforward administration tools. It provides advanced querying, indexing, counter management, extensions, and robust security measures. With its ability to handle modern applications and facilitate seamless data transfer, stands out as an efficient and reliable database management solution.

Key Features of **RavenDB Enterprise**:

1. ACID Database Transactions
2. High Performance (150,000 writes per second)
3. Advanced Query Engine with mapping and indexing
4. Database Management Studio for a user-friendly experience
5. Multi-model architecture for various services
6. Multi-platform support (Windows, Linux, macOS, etc.)
7. Integration with Relational Databases
8. Time Series functionality with querying and indexing
9. Querying capabilities, including Raven Query Language and Full-Text Search
10. Indexing features like Intelligent Auto Indexes and Static Indexes
11. Counters for distributed counting
12. Extensions for additional functionalities like Revisions, Expiration, Attachments, and more
13. Clustering for High Availability with dynamic database distribution

所有软件资源 100%安全 已检测 无病毒 无篡改

Tools Database

14. Operational Stability with cluster-wide transactions
15. Replication options include External, Hub-Sink, and Filtered Replication
16. Security measures with Certificates, Encryption, and Encrypted Backup
17. Monitoring tools like Server Dashboard, Cluster Dashboard, SNMP Monitoring, and Real-Time Statistics
18. Administration features including Periodic Backups, RavenCLI, and Administrator JS Console
19. Integration support with RavenDB ETL, SQL ETL, OLAP ETL, Elasticsearch ETL, Power BI, Kafka ETL, RabbitMQ ETL, Grafana, and various migration options for databases like MSSQL, MySQL, MongoDB, CosmosDB, PostgreSQL, and Oracle.
