Winsoft Bluetooth Library for iOS v1.5 for Delphi 10.4-12 Athens Full Source

2026-09-30 18:08:53

The is a user-friendly software tool designed to enhance the development of Bluetooth applications on iOS devices. It utilizes the Core Bluetooth API to effectively support Bluetooth Low Energy (BLE) clients, making it easier for developers to implement Bluetooth connectivity in their apps. This library is compatible with Delphi versions 10.4 through 12, ensuring it works smoothly with a range of Delphi environments.

Key Features of **Winsoft Bluetooth Library for iOS** :

1. Core Bluetooth API Integration: This integration enables the development of Bluetooth-enabled applications by leveraging this advanced API to provide robust support for BLE clients.
2. Compatibility with Delphi 10.4 to 12: Ensures that developers can use the library with multiple versions of Delphi, offering flexibility and longevity in application development.
3. Source Code Access: This feature is available with the registered version and allows developers to customize and optimize the library according to their specific needs.
4. Royalty-Free Distribution: Developers can distribute the Bluetooth functionality in their applications without royalty fees, providing cost-effective deployment options.
