Altium Concord Guru is one resource for part information, real-time sourcing info, part traceability in layouts, and cooperation with your mechanical design group, all over the Altium Designer coordinated surroundings.

Altium Concord Guru is the sole resource for part information, real-time sourcing info, part traceability in layouts, and cooperation with your mechanical design group - all over the Altium Designer coordinated surroundings.

Having one shared library, a standardized way of defining elements, and visibility into element status, Altium Concord Guru provides a single location to easily find, create and reuse component data you can expect - all inside your layout environment.

Altium Concord Pro eases a collaborative environment to help keep you and your mechanical staff in sync on design goals and some other modifications - to plank shape, element placement, and aluminum geometry - so that you can be certain that your mechanical and electronic layouts come together.

Adding"Where Used" performance, Altium Concord Guru can spot where any component was used, allowing your layouts to be kept current, along with your proven elements to be reused with assurance.

Altium Concord Guru brings live store data straight to your design environment so that you may design with real-time data - including availability, options, and pricing - at your fingertips.

- Actual information about hundreds of components' suppliers with inventory levels and pricing, conducted by Octopart
- Verified manufacturer components information, for example, lifecycles, alternative options as well as date datasheets, powered by IHS Markit®
