DTK Software License Plate Recognition SDK v4.2.126 + Image & Video Control

2026-05-21 07:42:58

DTK ANPR/LPR SDK v5 or the automatic number plate recognition and license plate recognition, is considered to be a software development kit which is basically designed for the integration of the automobile license plate recognition in the software. The ANPR/LPR engine has the ability to find the license plates from different video sources just like IP cameras, video files and even video capturing devices along with images, for the users and the developers. The rapid as well as the steady LPR algorithm as well as the technology is capable of providing the users with a high as well as a per side plate detection from the real time movies along with the resolution up to 1920x 1080 and also has the capability to support different nations plate format. It has the capability to be compatible with the regular IP camera protocols as well as the encoding process and can habit the movie resources and the supply which has been decoded by the frame picture as well as the engine of LPR. The SDK is considered to be constant with different programming languages just like the Java, C++, C#, VB.NET and so on to be mentioned.

ANPR/LPR Engine has the capability to provide the following advice concerning the plate to the users which is being recognized such as:

- Plate text
- Plate state code in case the state code is being chosen from the supported listing of the state.
- Plate coordinates on the frame of the image.
- Confidence of the plate in percent.
- Length of the picture in the format of JPEG.
- Camera title.
- Server name and so on.

DTK Software License Plate Recognition SDK Great Features:

It has the following features and attributes that are stated as below such as:

- There is 98% recognition rate available.
- Recognition can happen up to 16 plate within a single image frame.
- It has the capability to support 2 line plates.
- It can capture video from the cameras of IP, video file, as well as video capture devices.
- It can consider country formats as well as specific features for it users.
- It has the ability to provide coordinate as well as confidence of the individual characters that are available and belongs to a vehicle plate.
- It can detect the plate as well as the vehicle movement, along with the direction in a video.
