Tools　　Applications

AppSpider is a lively program security testing solution that permits you to scan mobile and web applications for vulnerabilities.

The core technologies supporting AppSpider are the Universal Translator, which translates the new technologies, including AJAX, HTML5, and JSON, used in the present internet and mobile programs and crawls conventional software.

Accessible on the assumption, hosted, or as a managed service, AppSpider allows you to efficiently manage your program security application, provides comprehensive analysis, in-depth program coverage, and complex attack methodologies.

Now's security groups are responsible for procuring hundreds of applications with complex wealthy customers and APIs, complying with government and industry regulations, and maintaining up with hacking tendencies. To these, building a successful program security application requires more than simply crawling the web software port. It is about having comprehensive program coverage and using more complex attack methodologies that address the technology utilized by contemporary applications.

Application security is tough, but using program security tools should not be. Software safety scans include a thousand choices, but Rapid7's appsec goods ship with program defaults based on years of program security expertise, so you could spend your time working on remediating vulnerabilities.

Using AppSpider, you can program, control, and quantify scans and look across all program scan information to monitor your security position improvements. In the end, AppSpider provides a method for you to evaluate and prioritize areas of greatest risk and lets you construct a modern business application security application.

Our dynamic program security testing (DAST) solution crawls to the deepest, darkest corners of the latest and intricate programs to efficiently test for danger and provide you with the insight you want to remediate quicker. Using AppSpider on your own side (or, instead, all your sides), then you're going to have the ability to scan all of the programs now and always be prepared for whatever comes next.

Rapid7 AppSpider Great Features:

Like its namesake, the Universal Translator is exactly what permits AppSpider to comprehend everything, everywhere--such as the protocols, formats, and development technologies used in modern cellular and browser-based software. Analyzing information from a conventional name: value pair crawl traffic recorded inside a proxy catch for contemporary programs, the Universal Translator normalizes visitors and strikes your program to discover vulnerabilities.

AppSpider's searchable vulnerability validation has become the very best remediation reporting available on the marketplace. Our interactive HTML reports lead to ease of use and efficacy, allowing developers to affirm vulnerabilities and replicate strikes in real-time easily.

AppSpider rates the detection and remediation of security vulnerabilities via integrations with Continuous Integration, QA automation, WAF, and pest monitoring, helping programmers solve safety defects inside their current program sets and providing a transparency process stream, leading to time savings and resource efficiencies.

Our product and research groups continue with the most recent program security strikes and best practices, so you don't need to. AppSpider goes far past the OWASP Top 10 to check for more than 95 attack kinds and best practices; you may also make customized checks to deal with problems and dangers custom to your surroundings.

Advantages of AppSpider comprise:

- Broad policy

- Advanced authentication
- Integrations
- Interactive reports
- Distributed and scalable
- Centralized control
- Continuous website tracking
- End to end testing of APIs constructed together with all the OpenAPI Specification (previously Called Swagger)
