

DevExpress MAUI v26.1.3 Source Code

2026-07-19 14:39:33

The **DevExpress MAUI** offers a comprehensive set of UI components for developing high-performance mobile apps on Android and iOS. Built with native code and seamlessly integrated with .NET MAUI, these components allow you to create powerful apps using Visual Studio, C#, and .NET 6+. By handling the complexities of mobile development, the library helps you focus on building apps with modern, responsive designs that deliver a smooth user experience. Whether you need to display data, manage scheduling, or design dynamic interfaces, this library offers the tools to do the job efficiently.

Designed with Material Design 3 principles, the library ensures your app's interface looks modern and cohesive. The built-in themes and customization options make it easy to adapt colours, shapes, and styles to match your brand's identity. The components are optimized for performance, ensuring fast data rendering, smooth scrolling, and quick interactions even when dealing with large datasets. From data grids and charts to schedulers and editors, these controls work flawlessly across devices, enabling you to build polished apps without worrying about platform-specific issues.

also includes specialized controls for mobile-specific needs, such as bottom sheets, popups, and shimmer effects that enhance user experience. With rich features for data management, UI customization, and cross-platform consistency, DevExpress .NET MAUI components make it easier to develop mobile apps that are visually appealing, responsive, and performant.

Key Features of DevExpress MAUI:

1. High-Performance Controls: These controls are optimized for speed and smooth operation, with native code and support for large datasets, real-time updates, and OpenGL rendering.
2. Modern Material Design 3: Pre-built themes, customizable palettes, and dynamic colour generation for consistent and visually stunning UI.

3. Comprehensive Data Management: Data grids, collection views, and schedulers with support for sorting, filtering, grouping, CRUD operations, and smooth scrolling.
4. Flexible Layout and Customization: Fully customizable charts, schedulers, and form editors with numerous configuration options for styles, templates, and user interactions.
5. Mobile-Centric UX Components: Bottom sheets, popups, tabs, and shimmer effects designed specifically for mobile interfaces, allowing for intuitive and fluid navigation.
6. Seamless Integration with .NET MAUI: Native control "wrappers" that work perfectly within the .NET MAUI framework, making cross-platform development easier while maintaining top-tier performance.
