

ChartDirector for .NET v7.1.0.0 (WinForms & WPF & WebForms & MVC)

2025-12-02 16:02:45

ChartDirector is a professional charting component for windows and Internet programs. It is accompanied by an extensive graph range including menu, donut, bar, line, spline, step line, trend line, and curve-fitting. Charts can be displayed on the screen or exported into PDF, SVG, PNG, JPG, GIF, and BMP formats. You may customize each graph detail such as axes, zones and marks, text, tags, and automatic scaling. ChartDirector supports .NET, .NET Center, WPF, ASP.NET MVC, Web Forms and Windows (C#, VB and other CLI languages), C++, Java, JSP, ASP, COM, VB, VBScript, VBA, JavaScript, PHP, Perl, Python, and Ruby. It works on Windows, Linux, FreeBSD, Solaris, Mac OS X programs.

ChartDirector is a charting library with comprehensive chart kinds, real-time graphs, monitor cursors, sexy spots, big data collections, zoom/scroll, and viewports.

ChartDirector supports both the .NET Framework and .NET Core, which also may be used for both web (ASP.NET) and desktop (Windows Forms/WPF) applications.

Produce high-speed real-time graphs with programmable monitor cursors for dimensions, and take snapshots like PDF or graphics. Create charts with big data sets that could pan and zoom with viewports. Extensive graph types and meter fashions. Develop Expert WPF, Windows Forms, ASP.NET MVC, and Web Forms charting software in C#, VB, and others. NET CLR compliant languages. ChartDirector contains chart controls which don't only display the graphs, but also provide user interaction features like tooltips, scrolling and zooming controls, and programmable track cursors. Most graph items support a complete package of mouse events such as customizing user interactions. Contains loads of C# charting and VB charting illustrations. Plotting countless data points are shared with ChartDirector. With this data, scrolling and zooming features are helpful. Together with ChartDirector, in added with the mouse wheel and then click and drag to scroll and zoom, there's a Viewport controller that can show the complete data range using a highlighted box revealing that the visible range in the primary graph. Users can resize the box to zoom in/out and move the box to scroll in the X and Y directions.
